

Assembling the Folding 3D Sci-Fi Station Module "A"

Print 3 copies of wall sheet #1, and 1 copy of the floor.

Assemble 3 short walls and 2 long walls; discard the other long wall.

You can use the 3 doors in this module or any other in the series.

Glue the short walls to the floor, lining up the large squares on the walls' floor tabs with the large squares on the floor. Align the long walls in a staggered pattern, as below:

```
#####  
#       | #  
#__|___+_#  
#  +   | #  
#__|___|_#  
#  |   | #  
#__|___+_#  
#  +   | #  
#  |   #  
#####
```

(Plus-signs are doors in the long walls. Doors in the short walls are not shown.)

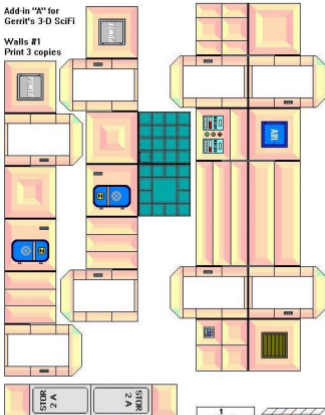

This results in two interior rooms with doorways on opposite sides of the module, and halls and passages of differing widths all around the exterior.
