

## Assembling Folding Space-Station Interior "B"

### The Life-Support Area

Print two copies of FSB\_3 (short wall sections), and one copy of each of the other pages. Assemble the walls and floor just like any of the other space-station interiors. The short (six-tile) walls go into each end, and the very-short (four-tile) walls go in the middle. This will make four internal rooms. One of these has a matter-transporter grid on the floor.

Glue the four machinery sections to the sections of wall and floor marked for them. Glue the small control panel to the long wall and floor next to the transporter grid in the lower room. The large panel goes on the same wall in the upper room. Make sure all machinery and panels are glued to the long folding walls, not the short removable walls. It looks like this when done:

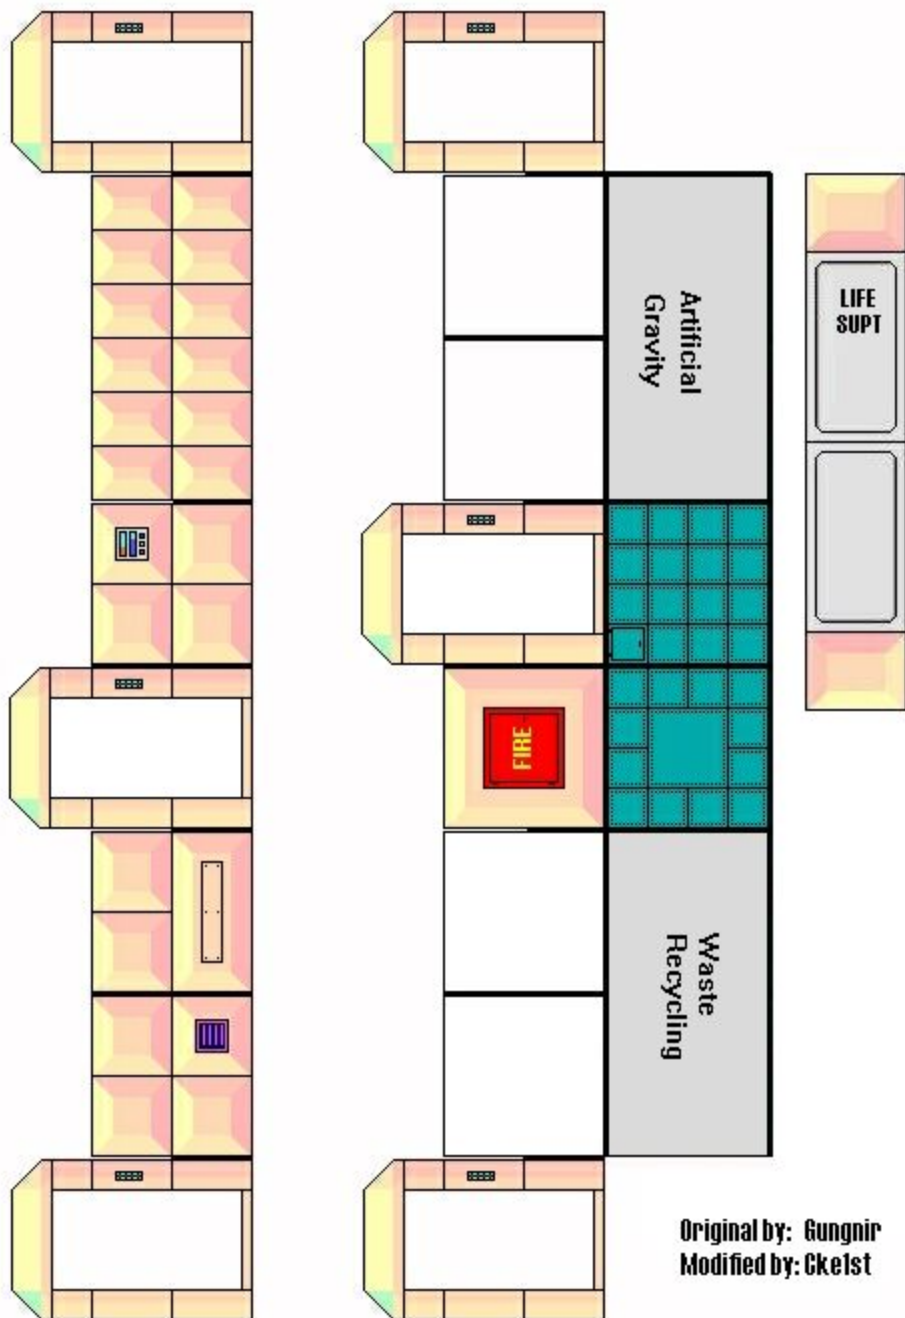

```
#####
#  +  +  #
#+-|-|-|+ #
# [l Ll] #    "L" is the large control panel
# [l Ll] #    "[" and "]" are sections of life-support machinery
# -l+-l- #
#  |  +  #    "+" signs are doors
#  +  |  #
# -l-+l- #
# [l  l] #
# [l@s l] #    "s" is the small panel
#+-|-|-|+ #    "@" is the transporter grid
#  +  +  #
#####
```

If you need exterior walls for this module, use the ones from any of Gungnir's interiors.
