

## Tree Line Instructions

The Treelines are intended to be connected at the ends to form a ring.

You should print out as many as you will need to loop together to make a forest of the size you wish.

This outside ring of trees determines the edge of the forest but allows you to place figures inside without knocking parts or the whole thing over. The rings can be folded flat for storage then opened back up to the ring of trees.

They can also be separated and used as stand alone trees when fitted with a base.
